

Arcade Control Panel

About us

This whole arcade adventure started when we were dating and Susan mentioned that she loved Galaga....first mistake! That Christmas Susan got a Galaga machine under the tree! 30 games (and a few major life events) later, we then moved to Hawaii, got married and Bryan was looking for faster ways to get his parts, so he started buying in bulk....second mistake!

The store had simple beginnings with just one product, LED buttons. But this quickly evolved into much more. We are now at almost 1000 products in our store and I have a full time job in paradise. Bryan misses his time in engineering and loves to design new parts and products, which is why we have one of the most extensive collections of custom products around. Susan has a knack for organization and packing, no other person in the world can fit as much safely into a \$6 priority envelope as Susan can.

We truly are a "Mom and Pop" shop. The phone number on our site is Susan's cell phone and we run the "store" out of our home. This means that we know our products and we get to know our customers. Susan can often be seen soldering pins into boards or drilling out bubble ball tops for customers who order an LED and a ball top together. All our LED buttons and ball tops are also tested before shipping. We do like to make this a family affair, in December of 2008 we were blessed with a wonderful baby boy who can sort buttons faster than either of us (talk about learning your colors, now if we can only get him to count inventory when he does this!

Fight Stick 1

This is another generic Sanwa, similar feel, 8 way, but with .187 tab connections so you can drop easily do a drop in replacement . Great inexpensive fight stick with .187 tab connections.

The Universal plate is a 16 gauge steel plate made to mount to most of the popular joysticks today and allows them all to be used with each others respective mounts. If you have every tried to put an LS-32 into an Dynamo cabinet, or mount an IL stick in a fight stick case you know the pains of trying to make things match up.

Silent JLF Modification

Already have a JLF but want to go silent? This kit includes the microswitches, actuator, and harness you need to convert your JLF into a silent JLF.

Real Omron switches, 2-0.5mm & 1-1mm oversized actuators, and an awesome .187 to JLF harness.
